First Slide of Content

We can include math content in this slide, in line, like this $\int_0^1 \sin(x) dx$, or like so $\int_0^1 \sin(x) dx$, or display the equation on its own line:

$$\int_0^1 \sin(x) dx.$$

We can also use environments:

Definition

An integer n is prime if it is divisible by exactly two positive integers.

Example

The number $n = 3$ is prime because the only positive integer divisors of n are 1 and 3.

Notice that this slide has no title on top, and no footer either, because we used the option “[plain]” in this frame.

If you use the command `\pause`, then...

Notice that this slide has no title on top, and no footer either, because we used the option “[plain]” in this frame.

If you use the command `\pause`, then... you introduce a pause in your document, and the rest of the text will appear in the next page.

Notice that this slide has no title on top, and no footer either, because we used the option “[plain]” in this frame.

If you use the command `\pause`, then... you introduce a pause in your document, and the rest of the text will appear in the next page.

In this way you can control the pace of your presentation.

Sometimes it is useful to use two or three columns.

$$\sin(x)$$

You can use columns with the environment “columns.”

$$\cos(x)$$

This is the **third** and last column.

$$\tan(x)$$

The End

Finally, this is how display an image in your talk:
